

dequeue_mode string

While set to *off*, keep users in the waiting room. When the value is *on*, redirect them to the origin at a rate specified by *rate_limit*.

Allowed values:

Default:

waiting_room_path string

Netstorage path for the waiting room HTML file. It should have the full path with *"/{upload-directory-id}/path"*.

metric_interval number

The time, in seconds, to enable and disable the waiting room. This time represents how long the traffic is at or above the rate limit before traffic is directed to the waiting room.

Default:

rate_limit number

The rate limit for the domain. The maximum users per second allowed to reach the origin.

Default:

rate_period number

The period, in seconds, for the *users_per_period* rate.

Default:

max_origin_usage_time number

The amount of time, in seconds, that users can access the origin. Once a user has been granted access, the *max_origin_usage_time* determines how long that user can access the origin before they are forwarded to the waiting room after coming to the EdgeWorker again.

Default:

waiting_room_interval number

The time interval, in seconds, when the waiting room status page is reloaded.

Default:

request_priority array[number]

Requests may optionally specify a priority level, represented by a numerical value. A lower numerical value signifies a higher priority, ensuring these requests are processed preferentially. The array provides a list of all valid priority values available for use with this domain.

Example:

custom_attributes object

```
"dequeue_mode": "on",
"waiting_room_path": "string",
"metric_interval": 60,
"rate_limit": 100,
"rate_period": 1,
"max_origin_usage_time": 60,
"waiting_room_interval": 10,
"request_priority": [
  1,
  4,
  255
],
"custom_attributes": {}
}'
```

Response Example

```
1  {
2    "domain_key": "string",
3    "created_at": 1694757000
4  }
```

⚡ powered by **Stoplight**

A JSON object containing custom attributes Any valid JSON can be stored here. It is not used by the waiting room at this time.
